The following is an examiner's statement of reasons for the indication of allowable subject matter: In the examiner's opinion, the allowable subject matter in this case is a first engaging pin passed through the lateral wall portions of the connecting seat member; the engaging pin having: (1) a pressed end portion at a first end thereof, which is passed through the first lateral wall portion; (2) a thin portion next to the pressed end portion; the thin portion being narrower than the gap of the fitting portion of the locating seat member; (3) a cone-shaped portion next to the thin portion; and (4) a stopped portion next to the cone-shaped portion; the stopped portion being wider than the gap, and narrower than the through hole of the locating seat member; and a spring connected to the engaging pin for biasing the pressed end portion of the pin further away from the second wall portion; the engaging pin being going to be pressed against the slope of the locating seat member at the cone-shaped portion thereof while the connecting seat member is being fitted onto the locating

member such that the pin will be made to move in such direction as to compress the spring, and such that the pin will be passed through the gap and into the through hole of the locating seat member from the thin portion thereof, allowing the stopped portion of the pin to be through the through hole to engage the locating seat member for securing the connecting seat member to the locating seat member in combination with the other elements recited not anticipated by the prior art, nor would it have been obvious to a person of ordinary skill in this art.
